

Maximum performance for unsurpassed productivity.

W 250 Fi Cold Milling Machine

Maximum performance for unsurpassed productivity.

Our most powerful cold milling machine stands out for delivering maximum performance and unsurpassed productivity.

Rapid milling drum assembly changes and particularly fast milling drum changes for milling widths of 2.2 m, 2.5 m, or 3.8 m thanks to the MCS (Multiple Cutting System) further expand the machine's wide range of applications.

In automatic mode, the innovative MILL ASSIST machine control system always selects the best ratio between performance and costs - in addition, an operating mode can be selected based on cost, performance, or quality.

The particularly wide front loading conveyor and the high-performance belt drive guarantee maximum material loading capacity.

The new **LEVEL PRO ACTIVE** leveling system built directly into the machine control system optimizes precision in height control and machine positioning.

Highlights of the Cold Milling Machine at a Glance

04
05

Operation

1| EXCEPTIONAL COMFORT ON THE OPERATOR'S PLATFORM

- > Perfect view of important working areas
- > High-performance LED lighting
- > Generously sized storage space
- > Powerful heater for operator's platform
- > Variable, vertically adjustable weather canopy
- > SMART KEY to save user-specific machine parameters

2| INTUITIVE MMI - MAN MACHINE INTERFACE

- > Flexible control panel concept for maximum machine control
- > 2" control panel with favorites buttons
- > 5" control panels for leveling
- > 7" control panels conveniently display important information
- > Heavy-duty, high-quality camera/monitor system with 10" control panel

Quality

3| HIGH-PRECISION, VERSATILE LEVEL PRO **ACTIVE** LEVELING SYSTEM

- > New, easy-to-use **LEVEL PRO ACTIVE** operating concept
- > Numerous additional and automatic functions
- > Optimized 3D and laser leveling
- > Leveling boom with Sonic-Ski sensor on both sides
- > Optimized multiplex system

4| HIGH RELIABILITY

- > Groundbreaking diagnostic concept
- > Redundant machine control
- > Robust, reliable CAN network
- > Reliable vandalism protection
- > Time-saving service and maintenance concept

Milling

5 | ONE-OF-A-KIND CUTTING TECHNOLOGY

- > Rapid milling drum changes thanks to **MCS BASIC**
- > Simple milling drum assembly changes
- > Optimized protection against milling drum assembly wear
- > Extremely wear-resistant **HT22** quick-change toolholder system
- > New **HT22 PLUS** toolholder upper part with increased service life

6 | INNOVATIVE MILL ASSIST

- > **MILL ASSIST** automatic mode for maximum cost efficiency
- > One-of-a-kind dual engine control for maximum performance and efficiency
- > Additional pre-selection of an operating strategy in automatic mode
- > Clear pre-selection of constant milling pattern quality
- > Innovative efficiency indicator

Performance

7 | MAXIMUM MILLING PERFORMANCE

- > **ACTIVE DUAL POWER** Dual engine drive system for a massive power spectrum
- > Large scraper lift with high setting depth
- > Flexible and powerful loading of milled material
- > **ACTIVE CONVEYOR** for swinging the discharge conveyor relative to the steering angle

8 | INFORMATIVE WPT - WIRTGEN PERFORMANCE TRACKER

- > Field-tested WITOS FleetView telematics system
- > Optional additional equipment **WPT** for clear documentation of milling performance
- > Automatically generated measurement reports
- > Job site tracking via satellite map display
- > Documentation of consumables to calculate operating costs

Cost-Effectiveness

9 | MAXIMUM EFFICIENCY

- > Unmatched engine control solutions for maximum diesel savings
- > Dual engine automatic stop feature
- > Maximum performance and cost-effectiveness at low speeds
- > Dual fan concept for optimum cooling

10 | ENVIRONMENTALLY FRIENDLY MACHINE TECHNOLOGY

- > Maximum exhaust gas purification for low exhaust emissions
- > Reduced noise emissions during relocation
- > Optimized VCS extraction system
- > Start-stop engine function via external control panel
- > Efficient water management

CONNECTED MILLING

06
07

COLD MILLING
MACHINE

CONNECTED
MILLING

MACHINE
OWNER

An efficient flow of information is the key to making processes easier, faster, and more cost-effective. WIRTGEN has been committed to this approach for many years and refers to the topic in the field of milling technology as **CONNECTED MILLING**.

CONNECTED MILLING refers to the innovative, diverse flow of information between the machine and its various components, the machine operator, the service workshop, and the scheduling offices. This available data and information can be used to make milling operations even more efficient and further increase machine reliability.

In the new generation of large milling machines, the latest, innovative **CONNECTED MILLING** features include the **MILL ASSIST** intelligent assistance system and the **WIRTGEN PERFORMANCE TRACKER** high-precision milling performance measurement system.

MILL ASSIST can be used to assess relevant information such as engine load, milling drum type, milling depth, or traveling pressure, for example, in order to set the optimum milling drum speed. In addition, the machine operator can pre-select a work strategy with respect to costs, performance, or quality.

The **WIRTGEN PERFORMANCE TRACKER** uses a laser scanner to measure the cross-sectional profile to be milled. Surface milling performance and milling volume are then precisely measured using GPS positioning and other sensors. Afterwards, an automatically generated report is created that documents the daily milling performance, including all consumables, a precise site plan, and a wealth of other information, which is then sent to the machine dispatcher, for example. The machine operator receives important information directly via the control panel display.

In WIRTGEN's new generation of large milling machines, **CONNECTED MILLING** becomes even more important for machine operators.

Exceptional Comfort on the Operator's Platform

PERFECT VIEW OF IMPORTANT WORKING AREAS

The large milling machine's intelligently designed visibility concept makes the operator's work much easier and results in precise milling results. For example, the operator's platform can be extended to the right by more than 20 cm beyond the edge of the machine to guarantee that the operator has an unobstructed view of the area to be milled and the loading of the milled material. In addition, the narrow chassis is designed with a wasp waist at the front left and right as well as at the back right. This means that the operator always has a good view of the crawler unit and milling edge.

HIGH-PERFORMANCE LED LIGHTING

The W 250 Fi has particularly powerful LED working lights all around the machine, lighting for the operator's platform, and "welcome and go home" lighting for comfortable access. In addition, the machine also

features control panel lighting, lighting for the milling drum assembly including auxiliary working lights for tool changes, and optional LED lighting balloons. This guarantees optimum machine illumination, even in difficult lighting conditions.

GENEROUSLY SIZED STORAGE SPACE

The W 250 Fi offers plenty of storage space for leveling sensors, pick ejectors, and tool buckets. The 1,620-liter, additional and optional XXL storage compartment at the rear of the machine can hold up to 72 pick buckets, while another 265-liter storage compartment on the operator's platform can also be used as an option.

1 | Ergonomically designed operator's platform.

2 | Optimum heating for the operator's hands and feet.

3 | Individually, vertically height-adjustable weather canopy.

4 | Weather canopy in transport position.

POWERFUL HEATER FOR OPERATOR'S PLATFORM

The cold milling machine is equipped with a high-performance heater for the operator's platform. Intelligently arranged air vents positioned near the operator's hands and feet guarantee an excellent heating effect. In addition, the generated heat is effectively kept close to the operator by lateral wind and weather protection elements and the lowerable weather canopy.

VARIABLE, VERTICALLY ADJUSTABLE WEATHER CANOPY

The height of the hydraulically height-adjustable weather canopy can be individually adjusted based on the respective operating and weather conditions. The height of the canopy can be adjusted at the touch of a button during milling operation, e.g. to avoid low-hanging branches on a street lined with trees. In addition, the heavy-duty windshields are equipped with window wipers. Exterior

canopy panels that can be moved independently of each other provide additional protection in the event of rain. The operator's platform railings are also equipped with wind and weather protection elements.

SMART KEY

The SMART KEY key fob can be used to save individually adjustable machine parameters such as the display configuration or the assignment of favorites buttons. The user-specific data can be saved on five different key rings and easily transferred to other cold milling machines.

Operation

Intuitive MMI – Man Machine Interface

FLEXIBLE CONTROL PANEL CONCEPT FOR MAXIMUM MACHINE CONTROL

The new control panel concept makes it possible to combine different control panels to meet specific customer requirements. The comprehensive and clear status, diagnostics, and informational display for the machine operator was an essential requirement for the WIRTGEN development engineers. The new, easy-to-understand, intuitive control panel concept optimally meets these requirements.

2" CONTROL PANEL WITH FAVORITES BUTTONS

In addition, up to two 2" control panels can be added to the operator's platform. In this context, the position of the panel on the left or right external railings of the operator's platform makes operation easier and more effective. It can be programmed with up to 21 individually selected functions, such as swinging the discharge conveyor.

5" CONTROL PANELS FOR LEVELING

For leveling with the **LEVEL PRO ACTIVE** leveling system, up to two additional 5" control panels on the right and left of the machine can be optionally fitted for ground crews.

7" CONTROL PANELS CONVENIENTLY DISPLAY IMPORTANT INFORMATION

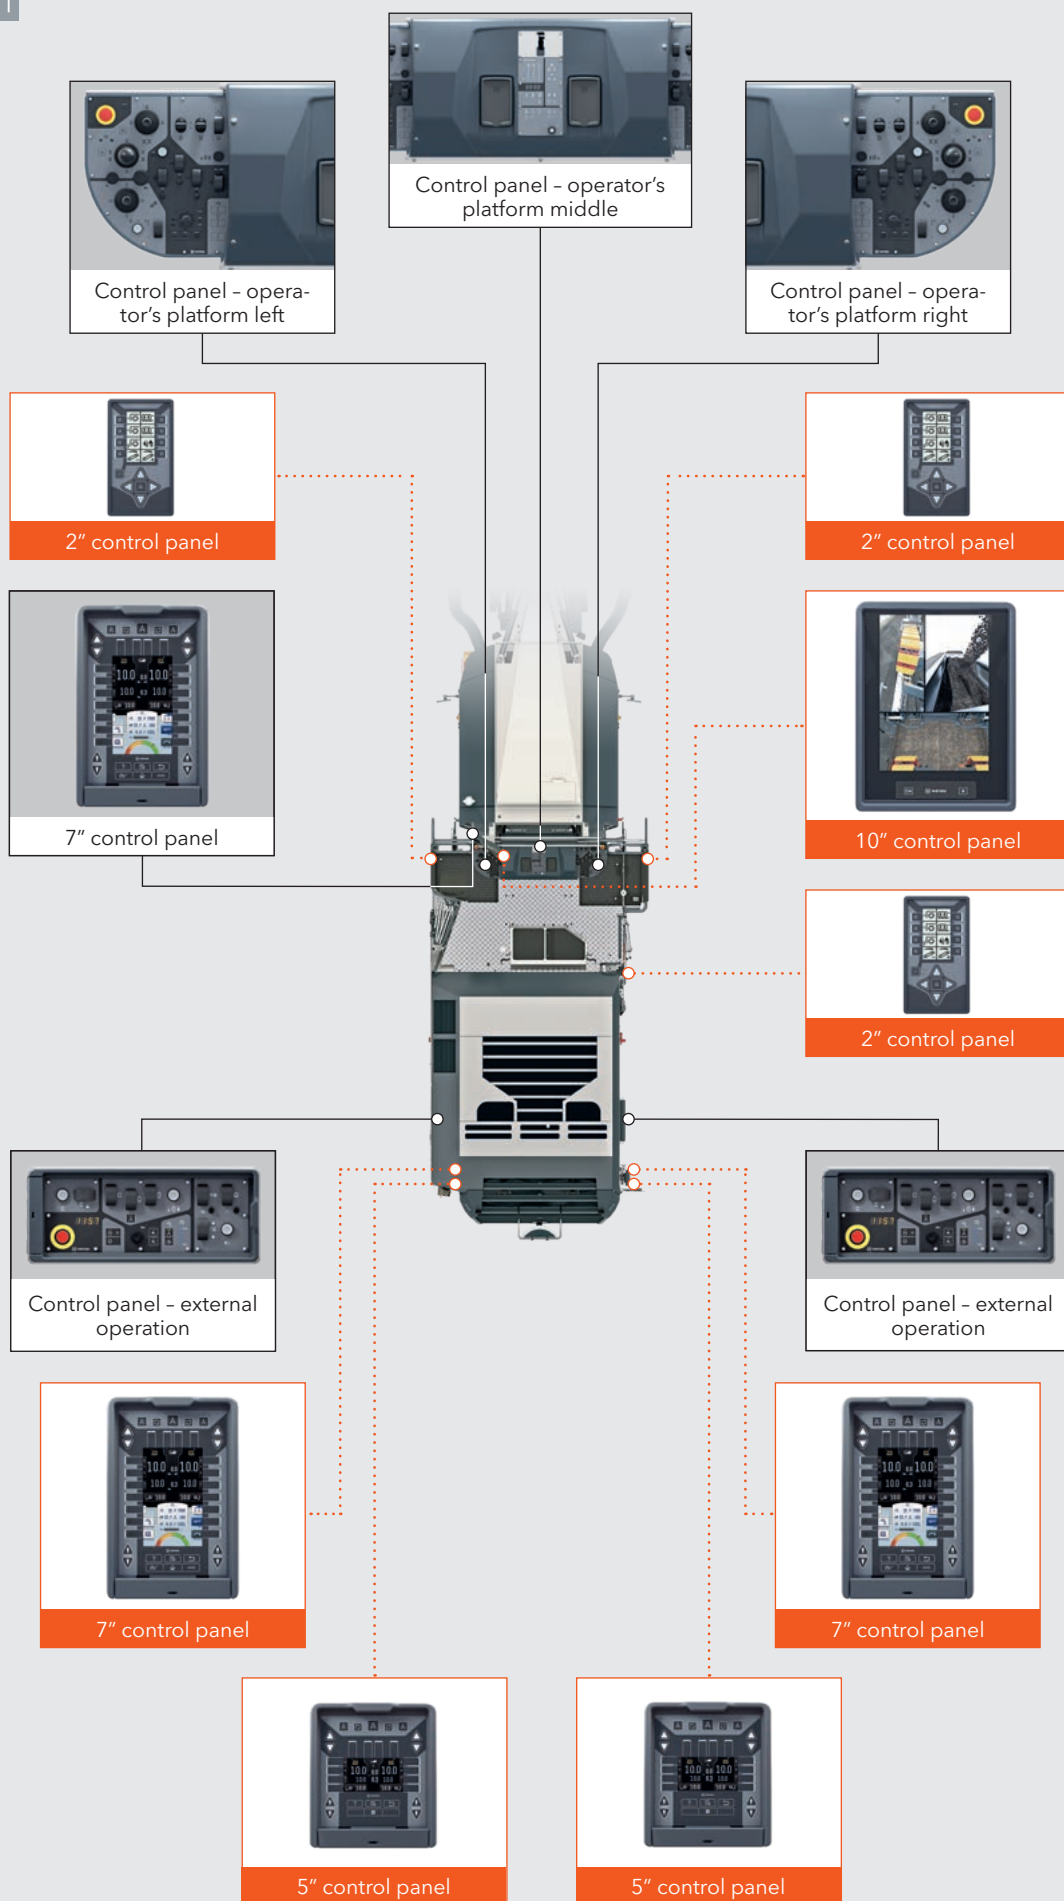

Whether up top on the operator's platform or at the lower operating positions, the new control panel concept provides comprehensive and clear information. As such, the 7" control panel offers all of the machine operators the following displays, for example: Machine load conditions, temperatures, hydraulic pressures, diesel and water levels, leveling control, status and diagnostic messages, and general information such as the current time.

1 | Individual, user-friendly panel layout.

2 | Overview of the different control panels and their positions.

2 |

□ = Standard control panels
 □ = Optional control panels

Operation

Intuitive MMI – Man Machine Interface

HEAVY-DUTY, HIGH-QUALITY CAMERA/MONITOR SYSTEM WITH 10" CONTROL PANEL

A two-camera, four-camera, or eight-camera system is also optionally available. In the two-camera system, the camera images are displayed on the 7" control panel on the operator's platform. The four-camera and eight-camera systems also come with a 10" control panel that can display several camera images simultaneously via

split screen. The heavy-duty camera/monitor systems provide the operator a clear view of important working areas, such as where the material is loaded onto trucks or the milled surface behind the scraper.

11

1 | 10" control panel with split screen to simultaneously display several camera images.

2 | Optional 5" control panel to display leveling information to ground crews.

3 | Various camera systems to provide a clear view of important areas.

3 |

Two-camera system:

Camera for rear area/camera for loading situation

Four-camera system:

Two-camera system plus additional cameras on the right and left sides of the machine facing forwards

Eight-camera system:

Four-camera system plus additional cameras on the right and left sides of the machine facing the rear/camera at the scraper/camera in front of milling drum

Quality High-Precision, Versatile **LEVEL PRO ACTIVE** Leveling System

NEW, EASY-TO-USE LEVEL PRO **ACTIVE** OPERATING CONCEPT

The new **LEVEL PRO ACTIVE** leveling system especially developed for cold milling machines and featuring innovative operating panels is intuitive and easy to operate. Fully integrated into the machine control system, it enables a high degree of automation because important machine functions are directly linked to each other, guaranteeing precise milling results. In addition, **LEVEL PRO ACTIVE** offers a simple and field-tested 3D system interface with the 3D kit.

NUMEROUS ADDITIONAL AND AUTOMATIC FUNCTIONS

The **LEVEL PRO ACTIVE** leveling system offers many automatic and additional functions that make the operator's job easier. All of the connected sensors are dis-

played and can be selected on the control panel. This also speeds up work processes. This means the entire machine can be lifted quickly and easily to drive over a manhole cover, for example.

OPTIMIZED 3D AND LASER LEVELING

The drastically simplified method of attaching laser sensors to the cold milling machine's weather canopy makes it easier to use 3D systems.

LEVELING BOOMS ON THE RIGHT AND LEFT WITH SONIC-SKI SENSOR

The new leveling booms with Sonic-Ski sensor make the contactless scanning of a wire or a reference surface on both sides at a distance of up to 1,900 mm from the milling edge possible. In this context, the boom can be adjusted hydraulically from the operator's platform by

11

up to 840 mm to the outside using the Sonic-Ski sensor during milling operation; and a mechanical adjustment offers an additional 880 mm of telescopic travel.

OPTIMIZED MULTIPLEX SYSTEM

The multiplex system consists of two ultrasonic sensors attached to flexibly adjustable swing legs on each side of the machine. Benefits of the system include the large adjustment range for a wide variety of leveling applications and the low weight of the individual units. The swing legs can be easily folded together onto the machine for machine transport.

1 | W 250 Fi with standard leveling sensors.

2 | Multiplex system with up to four ultrasonic sensors.

3 | Scanning in front of the milling drum.

4 | 3D leveling / laser leveling.

5 | Telescoping leveling boom.

Quality Exceptional Reliability

16
17

GROUNDBREAKING DIAGNOSTIC CONCEPT

The new diagnostic concept guides the operator easily and intuitively through the troubleshooting process. Any potential malfunction is clearly indicated to the operator on the display, including a description of the fault. The operator can then locate the malfunction using optimized, easy-to-understand color graphics. Finally, detailed assistance in writing ensures that the operator can begin to correct the error.

> REDUNDANT MACHINE CONTROL

Three control computers built into the machine can be interchanged variably in order to ensure that the machine is always operational in the event that one of the three computers fails. In addition, the two 7"

control panels on the operator's platform and outside for ground crews can be interchanged variably while maintaining all of the machine's functions.

ROBUST, RELIABLE CAN NETWORK

A backup CAN bus has been installed in important areas and can be switched to if necessary. The main control elements are equipped with two-channel signal transmission, meaning that they can still be used if one signal fails. Information about a signal failure is also displayed to the operator.

11

1 | Images are directly forwarded from the error message to the diagnostics with clear localization.

2 | Easily accessible service points.

3 | Secure and fast protection of control panels.

RELIABLE VANDALISM PROTECTION

The innovative vandalism protection system protects the control panels against the use of force or theft. This means that the control panels on the left and right side of the operator's platform can simply be pushed into the main control panel and locked. The linearly arranged control panels on the operator's platform can be folded and secured by means of a special mechanism via the centrally positioned control panel. All in all, the simple method of securing the control panels also makes it possible to quickly prepare the machine for transport.

TIME-SAVING SERVICE AND MAINTENANCE CONCEPT

The W 250 Fi stands out thanks to significantly simplified access to the service points. As such, the air and hydraulic oil filters are easily accessible from the operator's platform when the engine cover is open, for example. The engine oil and diesel particulate filters are readily accessible from the ground for maintenance. In addition, all relevant machine components are quickly and easily accessible.

Milling One-Of-A-Kind Cutting Technology

18
19

RAPID MILLING DRUM CHANGES THANKS TO MCS **BASIC**

Milling drums can now be changed even faster thanks to the new generation of MCS milling drums. The milling drum rotation device can be used to release just one central screw at the push of a button. The only thing the operator has to do afterwards is simply pull out the milling drum. The MCS side panel can be opened quickly and effortlessly using the hydraulic cylinder drive.

1 | Milling drum changes are now even faster with the new MCS **BASIC** milling drum system.

2 | Large selection of different MCS milling drums.

This simplified process has many advantages: Rapidly changing milling drums with different tool spacings to meet specific application requirements increases machine productivity. Changing the milling drum at short notice and using the ideal drum for the job reduces wear costs. In addition, this systems guarantees maximum flexibility for the ever-changing requirements during day-to-day operations.

1 |

SIMPLE MILLING DRUM ASSEMBLY CHANGES

The new quick-change milling drum assembly allows different milling widths of 2.2 m, 2.5 m, 3.5 m, or 3.8 m to be selected. With the help of the simplified quick-change system, milling drum assemblies of different working widths can be changed in less than an hour. The significantly increased stroke of the machine height adjustment makes work much easier. In addition, only one electrical plug connection, four hydraulic quick couplings, and one water hose need to be connected.

ECO Cutter

Milling width: 2,200 mm
Milling depth: 0 - 350 mm
Tool spacing: 25 mm

Standard Milling Drum

Milling width: 2,200 mm

Tool spacing: 6 x 2 mm

Milling

One-Of-A-Kind Cutting Technology

OPTIMIZED PROTECTION AGAINST MILLING DRUM ASSEMBLY WEAR

The side plates are equipped with extremely wear-resistant protective skids on both sides. Additional optional rollers attached to the side plates prevent scratches on the asphalt. In addition, the material depressor on rollers gently glides over the surface.

EXTREMELY WEAR-RESISTANT HT22 QUICK-CHANGE TOOLHOLDER SYSTEM

The milling drums of the W 250 Fi are equipped with the **HT22** quick-change toolholder system, making them perfect for highly demanding milling tasks. In addition, the heavy-duty milling drum design enables the upper parts of the quick-change toolholders to be changed quickly on site, if required.

NEW HT22 **PLUS** TOOLHOLDER UPPER PART WITH INCREASED SERVICE LIFE

The new **HT22 PLUS** quick-change toolholder upper part features innovative centering marks on the tool contact surface. In combination with the new X² generation of picks, this reduces toolholder wear by up to 25% and also optimizes the rotation behavior of the picks. The new upper part offers considerable benefits such as higher milled surface quality and longer intervals between changes.

1 |

1 | Extremely wear-resistant HT22 quick-change tool-holder system.

2 | 2.2 m, 2.5 m, 3.5 m, and 3.8 m milling drum assemblies.

Milling depth: 0 - 350 mm
Tool spacing: 15 mm

Milling

Innovative MILL ASSIST

MILL ASSIST AUTOMATIC MODE

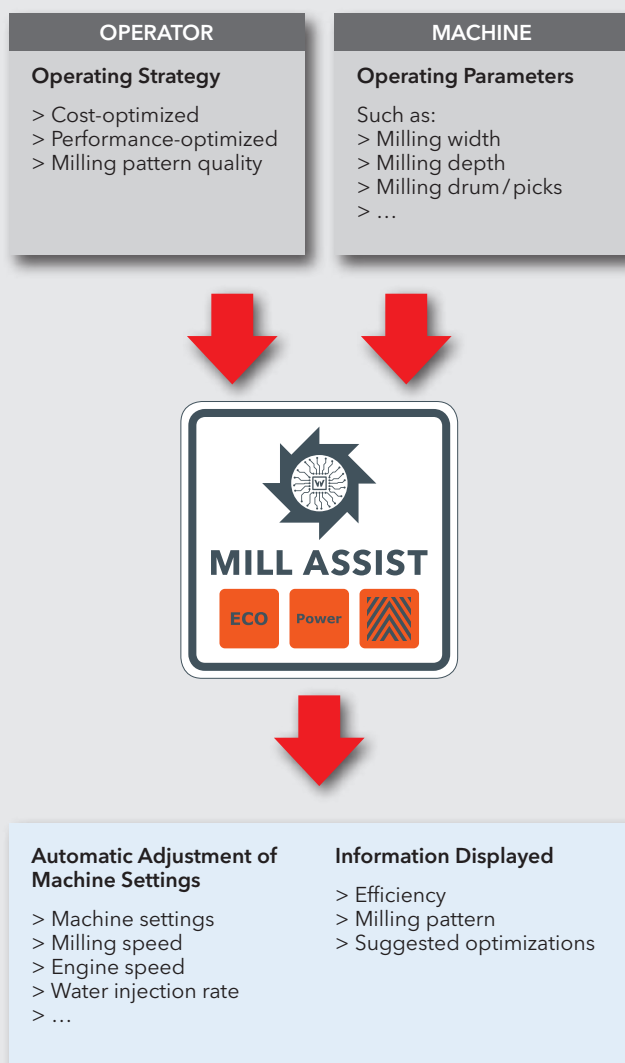

In automatic mode, the innovative **MILL ASSIST** machine control system always selects the operating strategy with the best balance between performance and costs. In doing so, the process optimization automatically adjusts the speed of the diesel engines and milling drum, the travel drive, the water system, and the machine's advance speed. This significantly reduces the operator's workload while improving machine performance and considerably reducing diesel consumption, CO₂ emissions, and noise.

ONE-OF-A-KIND DUAL ENGINE CONTROL

Thanks to the innovative engine control system, both engines always operate at maximum power and maximum fuel efficiency based on demand.

ADDITIONAL PRE-SELECTION OF AN OPERATING STRATEGY IN AUTOMATIC MODE

The operator can also pre-select one of three working strategies for the next application: "cost-optimized," "performance-optimized," or "milling pattern quality." The machine then automatically adjusts the main parameters based on the selected operating strategy.

CLEAR PRE-SELECTION OF CONSTANT MILLING PATTERN QUALITY

The operator can preset the required milling pattern quality by simply pre-selecting from a scale from 1 to 10. This then automatically sets the milling drum rotation speed and the milling speed, taking the milling drum type into account.

INNOVATIVE EFFICIENCY INDICATOR

The machine operator can constantly monitor the machine's status via an efficiency indicator. Changes to the milling parameters that could potentially improve efficiency are also displayed on the control panel.

During auxiliary operations, only engine 2 is active.

In milling mode, both engines are switched on.

Performance

Maximum Milling Performance

ACTIVE DUAL POWER DUAL ENGINE DRIVE

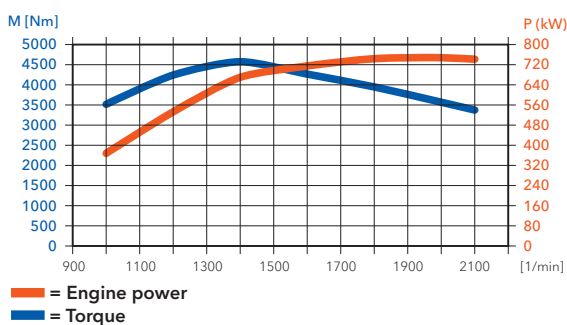

Both diesel engines deliver maximum power with high torque – and thanks to the **MILL ASSIST** engine control system, fast, productive work is possible across a very wide range of applications. The large milling machine fully leverages its impressive performance capabilities, particularly when the operating strategy “performance-optimized” for maximum area performance is pre-selected.

LARGE SCRAPER LIFT WITH HIGH SETTING DEPTH

The increased scraper lift makes greater milling depths possible and thus expands the machine’s range of applications when milling without material loading. This also allows a milling depth of up to 310 mm to be achieved as soon as the machine enters the position to begin milling. At the same time, reduced material accumulation minimizes wear on the milling drum housing and the milling drum. Different scraper contact pressure levels can also be selected quickly and conveniently at the touch of a button via the 7” control panel, depending on the requirements and application.

W 250 Fi COLD MILLING MACHINE ENGINE CHARACTERISTICS

1 | The discharge conveyor has a large swing range.

2 | Increased scraper stroke for a wider range of milling applications and reduced wear.

FLEXIBLE AND POWERFUL LOADING OF MILLED MATERIAL

Extremely wide conveyor swing angles of 65° to both sides make it possible to load material even in difficult situations, e.g. in intersections or turning areas. Pressing the "Booster" button on one of the two main control panels temporarily increases the belt speed by 20% and the loading capacity of the discharge conveyor by 20% in order to temporarily transport milled material particularly high or far onto a truck bed. Two swing speeds, the belt speed that can be adjusted at the touch of a button, and the hydraulically folding discharge conveyor further increase flexibility on the job site.

ACTIVE CONVEYOR

When repositioning the discharge conveyor in difficult job site situations, the semi-automatic ACTIVE CONVEYOR swing angle control system assists the operator in the best possible way – such as when milling in intersections or bypassing road installations.

Performance

WPT – The Informative WIRTGEN PERFORMANCE TRACKER

FIELD-TESTED WITOS FLEETVIEW TELEMATICS SYSTEM

The WITOS FleetView telematics system consists of the control unit (TCU) with a GPS receiver and a license to use the WITOS FleetView web application. The web interface provides a compact overview of the machine status with consumption data, operating hours, position data, error messages, and service intervals.

OPTIONAL ADDITIONAL EQUIPMENT WPT FOR CLEAR DOCUMENTATION OF MILLING PERFORMANCE

The additional equipment **WPT** also tracks the machine's actual milling performance and provides consumption and position data in a clear, automatically generated report. Milling cross-sections measured by a laser scanner are converted for the purpose of calculating the milling volume. The current milling volume and truck tonnage are constantly displayed to the operator on the 7" control panel during the milling process.

11

AUTOMATICALLY GENERATED SITE SURVEY REPORTS

Milling performance data is continuously transmitted to a data server via a cellular connection. After completing a milling job, a site survey report is automatically generated in both Excel and PDF formats and sent by e-mail to the machine operator's job management office, for example. The site survey report contains precise information on the milling volume, milled area, and milling depth with the corresponding GPS position.

JOB SITE TRACKING VIA SATELLITE MAP DISPLAY

The site survey reports contain easy-to-read satellite map images detailing the completed milling work. In this context, the milled areas are shown in different colors based on the various milling depth classes.

DOCUMENTATION OF CONSUMABLES

The site survey report contains valuable information on consumables such as diesel, water, and picks. Information such as the number of loaded trucks is also displayed, if confirmed by the machine operator. This makes it possible to calculate operating costs quickly and easily.

1 | The operator is always aware of the current machine and application parameters - at the end of the workday, the data is transmitted to the machine owner.

2 | The actual, currently active milling width is scanned by a laser scanner and clearly displayed on the operating panel.

Cost-Effectiveness

Maximum Efficiency

28
29

UNMATCHED ENGINE CONTROL SOLUTIONS FOR MAXIMUM DIESEL SAVINGS

The new **ACTIVE DUAL POWER** dual engine drive together with the **MILL ASSIST** system ensures that either one or both engines are automatically activated, depending on site conditions and the pre-selected operating strategy. In addition, the two extremely fuel-efficient engines run efficiently at the lowest possible speed. The result is not only optimum engine operation adapted to the respective application, but also enormous savings when it comes to diesel fuel and cutting tools.

DUAL ENGINE AUTOMATIC STOP FEATURE

The diesel engines are automatically switched off in idle mode after an appropriate cooling time. The engine stopping time is displayed on the control panels during the cooling phase.

MAXIMUM PERFORMANCE AND COST-EFFECTIVENESS AT LOW SPEEDS

The built-in **MILL ASSIST** machine control system ensures that the diesel engine of the W 250 Fi primarily runs at lower speeds while simultaneously delivering high performance and low diesel consumption.

INTELLIGENT DUAL FAN CONCEPT

Two separate speed-controlled and intelligently positioned fans cool the diesel engines and the hydraulic system as required. As a result, the cooling system also helps efficiently reduce diesel consumption.

Examples of the W 250 Fi's operating modes

Auxiliary Mode

In auxiliary mode, engine 2 is only active at low speed to power the hydraulic system in order to save fuel.

ECO

In ECO efficiency mode, engine 2 is active at low speed to power the hydraulic system and engine 1 is active at medium speed for milling operations.

Power

Engine 1 and engine 2 power the milling drum synchronously for maximum milling performance. Both engines now deliver high torque with maximum power (P).

Quality

To achieve maximum milling quality, engine 2 is active at low speed to power the hydraulic system and engine 1 is active at medium speed for milling operations.

Cost-Effectiveness

Environmentally Friendly

Machine Technology

Minimizing exhaust fumes, noise, and dust on road construction sites while maintaining maximum performance and productivity is more important than ever. Innovative WIRTGEN technologies play an extremely active role in protecting the environment and conserving natural resources.

Speed ranges that optimize consumption during milling operation, engine speeds that adapt to the advance rate, and engine temperature-controlled fan speeds all help to protect the environment and conserve resources. In addition, the milled material is a valuable recycled construction material and is completely reused in the production of asphalt mixes.

MAXIMUM EXHAUST GAS PURIFICATION FOR LOW EXHAUST EMISSIONS

In this context, the engine technology meets the requirements of the highest EU Stage V / US EPA Tier 4f emissions standard for minimal exhaust emissions.

REDUCED NOISE EMISSIONS DURING RELOCATION

The cold milling machine has a travel speed of up to 88 m/min. At the same time, only low engine speeds are required – with reduced diesel consumption and lower noise emissions.

OPTIMIZED VCS EXTRACTION SYSTEM

VCS improves air quality and visibility in the machine operator's and ground crew's working area. In addition, the optimized design of the more easily accessible VCS suction channel reduces the amount of cleaning required.

EFFICIENT WATER MANAGEMENT

Four separate water spray bar segments that can be activated electrically from the operator's platform allow the optimum amount of water to be added to the milling process, such as when milling only half the width of a lane. Automatic activation and deactivation of the water system as well as water injection on the basis of milling performance considerably reduce water consumption.

START-STOP ENGINE FUNCTION VIA EXTERNAL CONTROL PANEL

Engine 2 can also be switched on and off effortlessly by ground crews via the external control panel, making it possible to further reduce diesel consumption and noise emissions.

Standard Equipment

W 250 Fi

Basic Machine

Base machine with dual engine drive	■
Machine frame featuring a single wasp waist at the rear right, and a dual wasp waist at the front	■
Automatic pressure adjustment of the cylinder pump in accordance with performance requirements for reduced diesel consumption	■
Hydraulically opening engine cover with noise insulation	■
Air compressor system	■
Battery-operated hydraulic unit for auxiliary drive	■
Two cooling fans to minimize power consumption of the cooling system	■

Milling Drum Unit

Adjustment of material depressor contact pressure via the control panel or automatically via the MILL ASSIST feature to reduce chunk formation	■
Electrical adjustment of scraper contact pressure via the control panel	■
Automatically controlled locking feature of scraper	■
Milling drum rotation device with electro-hydraulic milling drum drive for slowly turning the milling drum during pick replacement	■
Single-piece water spray bar in the milling drum unit for reliable pick cooling and to prevent dust development	■
Automatic control of the water quantity via the MILL ASSIST feature	■
Height adjustment stroke increased by 200 mm to facilitate pick replacement and the exchange of milling drum units	■
Pre-fitting to allow the quick exchange of milling drum units	■
Hydraulically lifting side plates, clearance right 450 mm, clearance left 330 mm	■
Milling drum housing FB2200	□

Milling Drums

Milling drum FB2200 HT22 LA15 with 188 picks	□
---	---

Loading of Milled Material

Increased conveyor swing angles of 65° each to the left and right	■
Discharge conveyor with adjustable conveying speed and two swing speeds for precise loading	■
Boost feature for a temporary increase of the belt speed and conveying performance of the discharge conveyor by 20%	■
Water spray system in the primary conveyor	■
Larger conveyor pump for a constant belt speed even at a low engine speed of 1,300 rpm	■
Discharge conveyor, 8,150 mm long, 1,100 mm wide, with hydraulic folding device	□

Machine Control and Leveling

User-friendly control panel including 7" color screen	■
The LEVEL PRO ACTIVE leveling system with many automatic and additional functions that make the operator's job easier	■
LEVEL PRO ACTIVE - automatic height control in transport mode	■
LEVEL PRO ACTIVE - ramp milling and auto-start feature for the second milling pass	■

- = Standard equipment
- = Standard equipment, can be replaced with optional equipment if desired
- = Optional equipment

Machine Control and Leveling System	
RAPID SLOPE cross-slope sensor for LEVEL PRO ACTIVE leveling system	■
MILL ASSIST assistance system for automatic adjustment of the milling drum speed in accordance with the main area of application and the parameters selected in terms of engine load, advance rate, milling volume and quality of the milling pattern	■
Comprehensive machine diagnostics on the control panel including, for example, a diagnostic system for the CAN bus	■
Voltmeter integrated into the control panel for voltage measurement in the event of a malfunction	■
Two control panels for operating functions performed by ground crew	■
Operator's Platform	
Convenient access to the operator's platform, right and left	■
Anti-vibration mounted operator's platform across the full width of the machine including fold-out railing, right	■
Electrical control cabinet on the operator's platform for optimum accessibility and fast troubleshooting	■
Electrical level indicator for the water tank on the external control panels	■
Time display on the main control panel and on the exterior control panels	■
Two mirrors at the front, one mirror at the rear of the machine	■
Operator's platform with functional standing seat	□
Track Unit and Height Adjustment	
PTS - automatic alignment of the machine parallel to the pavement surface	■
ISC - intelligent track speed control including hydraulic four-track drive	■
Fourfold full-floating axle for high machine stability	■
High travel speed of up to 88 m/min at low engine speeds (1,350 rpm), reduced diesel consumption and low noise emissions	■
Miscellaneous	
"Welcome" and "Go Home" lights feature in the area of the operator's platform and access	■
Large storage compartment on the machine for pick containers	■
High-pressure water system with automatic on/off function, 18 bar, 67 l/min	■
Good accessibility to all maintenance points on the engine station	■
Pneumatic hammer with pick ejector/insertor	■
Comprehensive toolkit in lockable toolbox	■
A total of six EMERGENCY STOP switches in appropriate positions on the machine	■
Machine pre-equipped for installation of WITOS FleetView control unit	■
European type certification, EuroTest mark and CE conformity	■
Water tank filling from rear of machine	□
Standard painting in RAL 9001 (cream)	□
WITOS FleetView - professional telematics solution for machine operation and service optimization	□
Standard LED lighting system with 19,700 lumens	□

Milling Drum Unit	
Milling drum assembly MCS BASIC FB2200	<input type="checkbox"/>
Milling drum assembly MCS BASIC FB2500	<input type="checkbox"/>
Milling drum assembly MCS EXTEND FB3500	<input type="checkbox"/>
Milling drum assembly MCS EXTEND FB3800	<input type="checkbox"/>
Extension of MCS BASIC with one hydraulically opening side panel for FB2200/FB2500	<input type="checkbox"/>
Electrically switchable sectional water spray bar for FB2200	<input type="checkbox"/>
Electrically switchable sectional water spray bar for FB2500	<input type="checkbox"/>
Electrically switchable sectional water spray bar for FB3500/3800	<input type="checkbox"/>
Wear protection rollers for side plates	<input type="checkbox"/>
Transport cart for milling drum units from FB2200 to FB4400	<input type="checkbox"/>
Milling drum mounting and transport cart FB1500 to FB2500	<input type="checkbox"/>
Transport roller set for simplified milling drum unit change (FB1500 - FB3800)	<input type="checkbox"/>
Quick-change milling drum assembly FB2200 MCS BASIC	<input type="checkbox"/>
Quick-change milling drum assembly FB2500 MCS BASIC	<input type="checkbox"/>
Quick-change milling drum assembly FB3800 MCS EXTEND	<input type="checkbox"/>
Milling Drums	
Milling drum FB2200 HT22 LA18 with 156 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA15 with 182 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA18 with 156 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2500 HT22 LA15 with 196 picks	<input type="checkbox"/>
Milling drum MCS EXTEND FB3500 HT22 LA15, multi-part with 294 picks	<input type="checkbox"/>
Milling drum MCS EXTEND FB3800 HT22 LA15, multi-part with 314 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA8 with 297 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA25 with 121 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT5 LA6X2 with 740 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA8 with 18 standard picks and 298 PKD cutting tools	<input type="checkbox"/>
Milling drum MCS BASIC FB2200 HT22 LA15 with 18 standard picks and 180 PKD cutting tools	<input type="checkbox"/>
Milling drum MCS BASIC FB2500 HT5 LA6X2 with 840 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2500 HT22 LA8 with 335 picks	<input type="checkbox"/>
Milling drum MCS BASIC FB2500 HT22 LA25 with 148 picks	<input type="checkbox"/>
Loading of Milled Material	
Dual discharge conveyor, 8,150 mm long, 1,100 mm wide, with hydraulic folding device	<input type="checkbox"/>
Mounting aid for lifting out the primary conveyor when changing the milling drum unit	<input type="checkbox"/>
VCS extraction system	<input type="checkbox"/>
Signal lights for visual "stop-and-go" instructions for the truck driver	<input type="checkbox"/>
ACTIVE CONVEYOR swing angle control for discharge conveyor	<input type="checkbox"/>
Support device for discharge conveyor	<input type="checkbox"/>
Machine Control and Leveling System	
Actual milling depth measurement and display on the LEVEL PRO ACTIVE panel	<input type="checkbox"/>
Overload sensors installed on the scraper	<input type="checkbox"/>
Active floating position for the side plates, left and right	<input type="checkbox"/>
5" control panel for controlling the leveling system	<input type="checkbox"/>
7" control panel for displaying the machine control system and for controlling the leveling system	<input type="checkbox"/>
2" control panel with favorites buttons	<input type="checkbox"/>
Two 2" control panels with favorites buttons	<input type="checkbox"/>
User-specific saving of machine settings via SMART KEY key fob	<input type="checkbox"/>

Machine Control and Leveling System	
Extension of LEVEL PRO ACTIVE with leveling booms and a Sonic-Ski sensor	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE one hydraulic sensor mounted on the right	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with two hydraulic sensors mounted on the right and left	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with two ultrasonic sensors for multiplex scanning	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with four ultrasonic sensors for multiplex scanning	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with two ultrasonic sensors for multiplex scanning (FB3500/FB3800)	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with four ultrasonic sensors for multiplex scanning (FB3500/FB3800)	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with pre-fitting for 3D leveling for machines without canopy	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with pre-fitting for 3D leveling for machines with canopy	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with pre-fitting for 3D leveling for machines with cabin	<input type="checkbox"/>
Extension of LEVEL PRO ACTIVE with two laser receivers	<input type="checkbox"/>
Operator's Platform	
Operator's platform with functional standing seat and large storage compartment	<input type="checkbox"/>
Operator's platform with functional standing seat, large storage compartment, and weather canopy	<input type="checkbox"/>
Operator's platform with high-quality comfort cabin	<input type="checkbox"/>
Warm air heating close to the operator's hands and feet	<input type="checkbox"/>
Additional stand-up seat for operator's platform	<input type="checkbox"/>
Two-camera system	<input type="checkbox"/>
Four-camera system with 10" control panel	<input type="checkbox"/>
Eight-camera system with 10" control panel	<input type="checkbox"/>
Miscellaneous	
Hydraulically operated filling pump for water refilling	<input type="checkbox"/>
RAL 9001 Cream standard protection film	<input type="checkbox"/>
Painting in one special color (RAL)	<input type="checkbox"/>
Custom protection film color upon request	<input type="checkbox"/>
Execution without WITOS FleetView	<input type="checkbox"/>
WIRTGEN PERFORMANCE TRACKER including WITOS FleetView - precise tracking of the milling performance	<input type="checkbox"/>
Extended LED lighting system with 43,600 lumens	<input type="checkbox"/>
High-performance LED lighting system with 93,000 lumens, including LED lighting balloon	<input type="checkbox"/>
Two additional weights with a total weight of 1,500 kg	<input type="checkbox"/>
Large storage compartment at the rear of the machine for 72 pick buckets	<input type="checkbox"/>
Storage compartment close to the rear track units for 10 pick containers	<input type="checkbox"/>
High-performance high-pressure water blaster (150 bar and 15 l/min)	<input type="checkbox"/>
One hydraulic pick ejector	<input type="checkbox"/>
Two hydraulic pick ejectors	<input type="checkbox"/>
Electrical fuel filter preheating	<input type="checkbox"/>
Electrical diesel suction and pressure pump including 7.50 m suction hose	<input type="checkbox"/>
License plate holder with LED lighting	<input type="checkbox"/>
Drawbar eye attached to the rear of the machine with a maximum permitted horizontal load of 50 kN	<input type="checkbox"/>
