# WITOS Wirtgen Performance Tracker (WPT) Specific Terms and Conditions ("#WG-10")

Status: 22 March, 2021

Language: English

---

---

**CLOSE TO OUR CUSTOMERS****Terms and Conditions for the use of the WITOS Wirtgen Performance Tracker (WPT)**

Wirtgen Road Technologies GmbH - domiciled at Reinhard-Wirtgen-Str. 2, 53578 Windhagen, GERMANY - has developed the WITOS Wirtgen Performance Tracker (hereinafter: "**WPT**"). WPT is a WITOS-based telematics service. Any use of WPT is based exclusively on these Terms and Conditions.

**1. Subject matter**

WPT is a machine- and satellite-assisted measuring system for collection, analysis, display and transmission of data relevant for measurements and milling performance. WPT offers a more effective WITOS control unit (TCU), a differential GNSS receiver for detecting the precise machine position and laser scanners for detecting the respective milling width and depth. Real-time data, such as the current milling depth and width and truck loading as well as accumulated site- and machine service life-related milling performance data are displayed on the machine. Once a site is completed (either triggered by the automatic WPT system or by the operator), a site report is sent by e-mail. The site report contains various site-specific parameters: e.g. site location, a map showing milling trajectories and areas, various site schedules (site, milling or engine operating duration, etc.), information on the work performance of the machine (milled distance, area and volume, output volume, etc.) as well as a corresponding satellite map.

In addition, the reports are stored in the WPT database. The information about when the report is sent to which recipient and e-mail address is also stored in the database.

Moreover, all manual and automatic activities are logged in the system. These include e.g.:

- Manual creation of a report recipient by an administrator
- Deleting a report recipient which was manually created by an administrator
- Data synchronization via WUC2PM

The use of online delivery is guaranteed for 5 years from commissioning. Typical system accuracies when using the standard integrated levelling sensors and when milling at milling depths > 20 mm are in the range of +/-2.5%.

No personal data are generated and sent, such as the machine operator's name. A detailed description of the data processed by WPT is contained in the WPT Privacy Policy #WG-8 (European Economic Area [EEA]), #WG-9 (Rest of the World).

**2. Corresponding application of the WITOS General Terms and Conditions (#WG-2)**

To avoid repetition, the provisions of the "General Terms and Conditions of WITOS" (#WG-2) apply accordingly.
